

Office

Securing your workplace

We can deliver the ultimate interactive system to fit any office space. Whether securing multi-tenancy buildings and car parks or controlling staff access; we'll tailor the ideal solution.

Security and video with ProControl+

Control your entire system remotely via ProControl+; access security and video in one app to arm and disarm, or check what's happening. You can even check the system history to monitor staff activity.

Full video verification

Linking security devices such as internal or external detectors with cameras delivers video verification of system activity via ProControl+; alerting and showing you what's happening, so that appropriate action can be taken.

Compatible with professional 24/7 monitoring

Alongside the ability to monitor remotely via ProControl+, the system can be connected to your local alarm receiving centre (ARC) for professional 24/7 monitoring and response.

Full and separate area control

Arm and disarm the entire office or specific areas; supply staff with convenient, easy-to-use tags and/or ProControl+ access as required. This is ideal where restricting employee access to certain offices is necessary, as well as for multi-tenancy office spaces where separate access is required.

Enforcer V10

A multi-award-winning control panel that delivers a quick, non-invasive fully wireless installation, full remote ProControl+ functions and the ability to wire in devices if required.

Euro 46 V10

A hybrid control panel that delivers a wired installation, with wireless expansion capabilities to deliver a tailored system with full remote ProControl+ functions.

Magnetic contact

Device with two parts that notifies the system when separated – ideal for use on windows, doors and hatches.

Confirmation detector

Comprised of both a PIR and a dual-technology detector in a single housing, independently they work together to confirm an intrusion – excellent for small rooms where confirmation is required but too small for two individual detectors

Volumetric coverage PIR

Monitors a 12m radius volumetric area for body heat – perfect for indoor rooms and spaces.

Shock sensor

Detects vibrations on the surface it is affixed to - suited to windows and other vulnerable entry points.

ProControl+

Integrating video and intruder systems in one app to provide complete control over security systems.

Proximity tags

Easy to add, edit and delete, these can be simultaneously used for arming, disarming and door access.
